

0 Sudoku Variants

A standard Sudoku is a 9 by 9 grid. It is divided into 3 by 3 squares. The cells are filled with 1 through 9, and digits cannot repeat in columns, rows, and 3 by 3 squares.

A Sudoku XV follows all standard Sudoku rules, but has the letters X or V on lines. If one of these is present, the two cells on the line add to 10 if X and 5 if V. If no X and no V, the cells do not add to 10 or 5.

An inequality Sudoku follows all standard Sudoku rules, but has inequality signs on some lines. It shows which of the two cells is less.
